3.2.2	**Kinetics**	
	Collision theory	understand that reactions can only occur when collisions take place between particles having sufficient energy
		be able to define the term *activation energy* and understand its significance
		understand that most collisions do not lead to reaction
	Maxwell–Boltzmann distribution	have a qualitative understanding of the Maxwell–Boltzmann distribution of molecular energies in gases
		be able to draw and interpret distribution curves for different temperatures
	Effect of temperature on reaction rate	understand the qualitative effect of temperature changes on the rate of reaction
		understand how small temperature increases can lead to a large increase in rate
	Effect of concentration	understand the qualitative effect of changes in concentration on rate of reaction
	Catalysts	know the meaning of the term *catalyst*
		understand that catalysts work by providing an alternative reaction route of lower activation energy
