1.19 understand the term molar volume of a gas and use its values (24 dm^3 and 24,000 cm^3) at room temperature and pressure (rtp) in calculations.

e) Chemical formulae and chemical equations

Students will be assessed on their ability to:

1.20 write word equations and balanced chemical equations to represent the reactions studied in this specification

1.21 use the state symbols (s), (l), (g) and (aq) in chemical equations to represent solids, liquids, gases and aqueous solutions respectively

1.22 understand how the formulae of simple compounds can be obtained experimentally, including metal oxides, water and salts containing water of crystallisation

1.23 calculate empirical and molecular formulae from experimental data

1.24 calculate reacting masses using experimental data and chemical equations
