3.3 Data storage and compression	**3.3.1** Understand how to use and convert between binary and denary multiples (as defined by the International Electrotechnical Commission (IEC)): • bit • nibble • byte • kibibyte (KiB) 2^{10} • mebibyte (MiB) 2^{20} • gibibyte (GiB) 2^{30} • tebibyte (TiB) 2^{40} • kilobyte (kB), 10^{3} • megabyte (MB) 10^{6} • gigabyte (GB) 10^{9} • terabyte (TB) 10^{12}. **3.3.2** Understand the need for data compression and methods of compressing data (lossless, lossy), and that JPEG and MP3 are examples of lossy algorithms. **3.3.3** Understand how a lossless, run-length encoding (RLE) algorithm works. **3.3.4** Understand that file storage is measured in bytes and be able to calculate file sizes.
