|---|---|
| | The total number of marks available for this examination paper is 80. It contributes 20% to the Advanced GCE in Physics. |
| **Calculator** | It is recommended that students have access to a scientific calculator for this paper. |
| **Formulae sheet** | Students will be provided with the formulae sheet shown in *Appendix 8*: *Formulae*. Any other physics formulae that are required will be stated in the question paper. |

## 11.3 Reach for the Stars (STA)

The focus is on the physical interpretation of astronomical observations, the formation and evolution of stars, and the history and future of the universe:

- distances of stars
- masses of stars
- energy sources in stars
- star formation
- star death and the creation of chemical elements
- the history and future of the universe.

This topic uses the molecular kinetic theory model of matter and includes a study of the 'Big Bang' model of the universe. It also involves mathematical modelling of gravitational force and radioactive decay.

There are opportunities to develop ICT skills using the internet, data-logging and simulations.

There are several case studies that show how scientific knowledge and understanding have changed over time, providing students with opportunities to consider the provisional nature of scientific ideas.

| Students will be assessed on their ability to: | Suggested experiments |
|---|---|
| 109 investigate, recognise and use the expression $\Delta E = mc\Delta\theta$ | Measure specific heat capacity of a solid and a liquid using, for example, temperature sensor and data logger |
| 110 explain the concept of internal energy as the random distribution of potential and kinetic energy amongst molecules | |
| 111 explain the concept of absolute zero and how the average kinetic energy of molecules is related to the absolute temperature | |

| Students will be assessed on their ability to: | Suggested experiments |
|---|---|
| 112 recognise and use the expression $\frac{1}{2} m\langle c^2\rangle = 3/2\ kT$ | |
| 113 use the expression pV = NkT as the equation of state for an ideal gas | Use temperature and pressure sensors to investigate relationship between $p$ and $T$<br><br>Experimental investigation of relationship between p and V |
| 114 show an awareness of the existence and origin of background radiation, past and present | Measure background count rate |
| 115 investigate and recognise nuclear radiations (alpha, beta and gamma) from their penetrating power and ionising ability | Investigate the absorption of radiation by paper, aluminium and lead (radiation penetration simulation software is a viable alternative) |
| 116 describe the spontaneous and random nature of nuclear decay | |
| 117 determine the half lives of radioactive isotopes graphically and recognise and use the expressions for radioactive decay: $dN/dt = -\lambda N$, $\lambda = \ln 2/t_{½}$ and $N = N_0 e^{-\lambda t}$ | Measure the activity of a radioactive source<br><br>Simulation of radioactive decay using, for example, dice |
| 136 explain the concept of nuclear binding energy, and recognise and use the expression $\Delta E = c^2\Delta m$ and use the non SI atomic mass unit (u) in calculations of nuclear mass (including mass deficit) and energy | |
| 137 describe the processes of nuclear fusion and fission | |

| Students will be assessed on their ability to: | Suggested experiments |
|---|---|
| 138 explain the mechanism of nuclear fusion and the need for high densities of matter and high temperatures to bring it about and maintain it | |
| 118 discuss the applications of radioactive materials, including ethical and environmental issues | |
| 126 use the expression $F = Gm_1m_2/r^2$ | |
| 127 derive and use the expression $g = -Gm/r^2$ for the gravitational field due to a point mass | |
| 128 recall similarities and differences between electric and gravitational fields | |
| 129 recognise and use the expression relating flux, luminosity and distance $F = L/4\pi d^2$<br><br>application to standard candles | |
| 130 explain how distances can be determined using trigonometric parallax and by measurements on radiation flux received from objects of known luminosity (standard candles) | |
| 131 recognise and use a simple Hertzsprung-Russell diagram to relate luminosity and temperature use this diagram to explain the life cycle of stars | |
| 132 recognise and use the expression $L = \sigma T^4$ x surface area, (for a sphere $L = 4\pi r^2\sigma T^4$) (Stefan-Boltzmann law) for black body radiators | |
| 133 recognise and use the expression: $\lambda_{max}T = 2.898 \times 10^{-3}$ m K (Wien's law) for black body radiators | |
