C2.4 How are equations used to represent chemical reactions?		
Teaching and learning narrative	**Assessable learning outcomes** *Learners will be required to:*	***Linked learning opportunities***
The reactions of Group 1 and Group 7 elements can be represented using word equations and balanced symbol equations with state symbols. The formulae of ionic compounds, including Group 1 and Group 7 compounds can be worked out from the charges on their ions. Balanced equations for reactions can be constructed using the formulae of the substances involved, including hydrogen, water, halogens (chlorine, bromine and iodine) and the hydroxides, chlorides, bromides and iodides (halides) of Group 1 metals.	1. use chemical symbols to write the formulae of elements and simple covalent and ionic compounds	
	2. use the formulae of common ions to deduce the formula of Group 1 and Group 7 compounds	
	3. use the names and symbols of the first 20 elements, Groups 1, 7 and 0 and other common elements from a supplied Periodic Table to write formulae and balanced chemical equations where appropriate	
	4. describe the physical states of products and reactants using state symbols (s, l, g and aq)
