3.4.1	**Kinetics**	
	Simple rate equations	understand and be able to use rate equations of the form Rate = $k[A]^m [B]^n$ where m and n are the orders of reaction with respect to reactants A and B (m, n restricted to values 1, 2 or 0)
	Determination of rate equation	be able to derive the rate equation for a reaction from data relating initial rate to the concentrations of the different reactants
		be able to explain the qualitative effect of changes in temperature on the rate constant k
		understand that the orders of reactions with respect to reactants can be used to provide information about the rate determining/limiting step of a reaction
