3. **Trigonometry**		
3.1	The sine and cosine rules, and the area of a triangle in the form $\frac{1}{2}ab\sin C$.	Including the ambiguous case of the sine rule.
3.2	Radian measure, including use for arc length and area of sector.	Use of the formulae $s = r\theta$ and $A = \frac{1}{2}r^2\theta$.
3.3	Sine, cosine and tangent functions. Their graphs, symmetries and periodicity.	Knowledge of graphs of curves with equations such as $y = 3\sin x$, $y = \sin\left(x + \frac{\pi}{6}\right)$, $y = \sin 2x$ is expected.
