2.1.2 S.I. units

	Learning outcomes	Additional guidance
	Learners should be able to demonstrate and apply their knowledge and understanding of:	
(a)	Système Internationale (S.I.) base quantities and their units - mass (kg), length (m), time (s), current (A), temperature (K), amount of substance (mol)	Examples: momentum $\rightarrow$ kg m s^{-1} and density $\rightarrow$ kg m^{-3}
(b)	derived units of S.I. base units	
(c)	units listed in this specification	
(d)	checking the homogeneity of physical equations using S.I. base units	As set out in the ASE publication *Signs, Symbols and Systematics* (*The ASE Companion to 16–19 Science*, 2000).
(e)	prefixes and their symbols to indicate decimal submultiples or multiples of units – pico (p), nano (n), micro (μ), milli (m), centi (c), deci (d), kilo (k), mega (M), giga (G), tera (T)	As set out in above, e.g. speed / m s^{-1}.
(f)	the conventions used for labelling graph axes and table columns.
