2 **Algorithms on graphs**	2.1	**The minimum spanning tree (minimum connector) problem. Prim's and Kruskal's algorithm.**	**Matrix representation for Prim's algorithm is expected. Drawing a network from a given matrix and writing down the matrix associated with a network may be required.**
	2.2	**Dijkstra's** and Floyd's **algorithm for finding the shortest path.**	When applying Floyd's algorithm, unless directed otherwise, students will be expected to complete the first iteration on the first row of the corresponding distance and route problems, the second iteration on the second row and so on until the algorithm is complete.
