| **Memory** | **Content** |
|---|---|
| Key Concepts | • The stages of information processing: input; encoding; storage; retrieval; and output<br>• Types of forgetting: decay; displacement; retrieval failure (lack of cues).<br>• The structure and functions of the brain and how the brain works in the formation of memories; – how neurological damage can affect memory; the role of the hippocampus on anterograde amnesia; the frontal lobe on retrograde amnesia; and the cerebellum on procedural memory. |
| Theories/Explanations<br>The Multi-store Model of Memory<br><br><br><br><br><br><br><br><br><br>The Theory of Reconstructive Memory | • The structure and process of the Multi-store Model of memory:<br>◦ sensory store, short-term memory and long-term memory<br>◦ differences between stores in terms of duration<br>◦ differences between stores in terms of capacity<br>◦ differences between stores in terms of types of encoding<br>◦ criticisms of the model including rehearsal versus meaning in memory.<br><br>The Multi-store Model of Memory Research Study – an example of the impact, on behaviour, of neurological damage - Wilson, Kopelman and Kapur (2008): Prominent and persistent loss of past awareness in amnesia: delusion, impaired consciousness or coping strategy (the Clive Wearing study).<br><br>• The structure and process of the theory of reconstructive memory:<br>◦ the concept of schemas<br>◦ the role of experience and expectation on memory<br>◦ the process of confabulation<br>◦ distortion and the effect of leading questions<br>◦ criticisms of the theory including the reductionism/holism debate.<br><br>Reconstructive Memory Research Study – Braun, Ellis and Loftus (2002): study into How Advertising Can Change Our Memories of the Past. |
| Application<br>Techniques used for recall | • The use of cues, repetition and avoiding overload in advertisements and the use of autobiographical advertising<br>• The development of neuropsychology for measuring different memory functions, including the Wechsler Memory Scale. |
