

## 4.2.6 Hash tables

### 4.2.6.1 Hash tables

| Content                                                                           | Additional information                                                           |
|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| Be familiar with the concept of a hash table and its uses.                        | A hash table is a data structure that creates a mapping between keys and values. |
| Be able to apply simple hashing algorithms.                                       |                                                                                  |
| Know what is meant by a collision and how collisions are handled using rehashing. | A collision occurs when two key values compute the same hash.                    |
