
3.1.4 The lungs of a mammal also act as an interface with the environment. Lung function may be affected by pathogens and by factors relating to lifestyle.

Lung function	The gross structure of the human gas exchange system limited to the alveoli, bronchioles, bronchi, trachea and lungs. The essential features of the alveolar epithelium as a surface over which gas exchange takes place. The exchange of gases in the lungs. Pulmonary ventilation as the product of tidal volume and ventilation rate. The mechanism of breathing.
The biological basis of lung disease	The course of infection, symptoms and transmission of pulmonary tuberculosis. The effects of fibrosis, asthma and emphysema on lung function. Candidates should be able to • explain the symptoms of diseases and conditions affecting the lungs in terms of gas exchange and respiration • interpret data relating to the effects of pollution and smoking on the incidence of lung disease • analyse and interpret data associated with specific risk factors and the incidence of lung disease • recognise correlations and causal relationships.
