| <p>Inorganic ions occur in solution in the cytoplasm and body fluids of organisms, some in high concentrations and others in very low concentrations.</p> <p>Each type of ion has a specific role, depending on its properties.</p> <p><b>Students should be able to</b> recognise the role of ions in the following topics: hydrogen ions and pH; iron ions as a component of haemoglobin; sodium ions in the co-transport of glucose and amino acids; and phosphate ions as components of DNA and of ATP.</p> |                                      |
