

3.1.5	Introduction to Organic Chemistry	
	Nomenclature	know and understand the terms <i>empirical formula</i> , <i>molecular formula</i> , <i>structural formula</i> , <i>displayed formula</i> , <i>homologous series</i> and <i>functional group</i>
		be able to apply IUPAC rules for nomenclature to simple organic compounds, limited to chains with up to 6 carbon atoms limited in this module to alkanes, alkenes and haloalkanes
	Isomerism	know and understand the meaning of the term <i>structural isomerism</i>
		be able to draw the structures of chain, position and functional group isomers
