

3.2.5	Group 7(17), the Halogens	
	<i>Trends in physical properties</i>	understand the trends in electronegativity and boiling point of the halogens
	<i>Trends in the oxidising abilities of the halogens</i>	understand that the ability of the halogens (from fluorine to iodine) to oxidise decreases down the group (e.g. the displacement reactions with halide ions in aqueous solution)
	<i>Trends in the reducing abilities of the halide ions</i>	understand the trend in reducing ability of the halide ions
		know the different products formed by reaction of NaX and H ₂ SO ₄
	<i>Identification of halide ions using silver nitrate</i>	understand why acidified silver nitrate solution is used as a reagent to identify and distinguish between F ⁻ , Cl ⁻ , Br ⁻ and I ⁻
		know the trend in solubility of the silver halides in ammonia
	<i>Uses of chlorine and chlorate(I)</i>	know the reactions of chlorine with water and the use of chlorine in water treatment
		appreciate that the benefits to health of water treatment by chlorine outweigh its toxic effects
		know the reaction of chlorine with cold, dilute, aqueous NaOH and the uses of the solutions formed
