

3.2.6	Group 2, the Alkaline Earth Metals	
	<i>Trends in physical properties</i>	understand the trends in atomic radius, first ionisation energy and melting point of the elements Mg – Ba
	<i>Trends in chemical properties</i>	know the reactions of the elements Mg – Ba with water and recognise the trend
		know the relative solubilities of the hydroxides of the elements Mg – Ba and that Mg(OH)_2 is sparingly soluble
		know the use of Mg(OH)_2 in medicine and of Ca(OH)_2 in agriculture
		know the relative solubilities of the sulfates of the elements Mg – Ba
		understand why acidified BaCl_2 solution is used as a reagent to test for sulfate ions
		know the use of BaSO_4 in medicine
