

3.2.11	Analytical Techniques	
	<i>Mass spectrometry</i>	understand that high resolution mass spectrometry can be used to determine the molecular formula of a compound from the accurate mass of the molecular ion
	<i>Infrared spectroscopy</i>	understand that certain groups in a molecule absorb infrared radiation at characteristic frequencies
		understand that 'fingerprinting' allows identification of a molecule by comparison of spectra
		be able to use spectra to identify particular functional groups and to identify impurities, limited to data presented in wave-number form
		understand the link between absorption of infrared radiation by bonds in CO ₂ , methane and water vapour and global warming
