

3.4.2	Equilibria	
	<i>Equilibrium constant K_c for homogeneous systems</i>	know that K_c is the equilibrium constant calculated from equilibrium concentrations for a system at constant temperature
		be able to construct an expression for K_c for an homogeneous system in equilibrium;
		be able to perform calculations involving such an expression
	<i>Qualitative effects of changes of temperature and concentration</i>	be able to predict the effects of changes of temperature on the value of the equilibrium constant
		understand that the value of the equilibrium constant is not affected by changes either in concentration or the addition of a catalyst
