

3.5.2	Periodicity	
	<i>Study of the reactions of Period 3 elements Na – Ar to illustrate periodic trends</i>	be able to describe trends in the reactions of the elements with water, limited to Na and Mg
		be able to describe the trends in the reactions of the elements
		Na, Mg, Al, Si, P and S with oxygen, limited to the formation of Na ₂ O, MgO, Al ₂ O ₃ , SiO ₂ , P ₄ O ₁₀ and SO ₂ .
	<i>A survey of the acid base properties of the oxides of Period 3 elements</i>	be able to explain the link between the physical properties of the highest oxides of the elements Na – S in terms of their structure and bonding
		be able to describe the reactions of the oxides of the elements
		Na – S with water, limited to Na ₂ O, MgO, Al ₂ O ₃ , SiO ₂ , P ₄ O ₁₀ , SO ₂ and SO ₃
		know the change in pH of the resulting solutions across the Period
		be able to explain the trends in these properties in terms of the type of bonding present
		be able to write equations for the reactions which occur between these oxides and given simple acids and bases
