

4.2.5 Trees

4.2.5.1 Trees (including binary trees)

Content	Additional information
Know that a tree is a connected, undirected graph with no cycles.	Note that a tree does not have to have a root.

Content	Additional information
Know that a rooted tree is a tree in which one vertex has been designated as the root. A rooted tree has parent-child relationships between nodes. The root is the only node with no parent and all other nodes are descendants of the root.	
Know that a binary tree is a rooted tree in which each node has at most two children.	A common application of a binary tree is as a binary search tree.
Be familiar with typical uses for rooted trees.
