

4.3.2 Tree-traversal

4.3.2.1 Simple tree-traversal algorithms

Content	Additional information
Be able to trace the tree-traversal algorithms: • pre-order • post-order • in-order.	
Be able to describe uses of tree-traversal algorithms.	Pre-Order: copying a tree. In-Order: binary search tree, outputting the contents of a binary search tree in ascending order. Post-Order: Infix to RPN (Reverse Polish Notation) conversions, producing a postfix expression from an expression tree, emptying a tree.
