

3.2 Designing and making principles

3.2.1 Design methods and processes

Iterative design process

Students should be aware of, and able to explain, different approaches to user centred design. That in approaching a design challenge there is not a single process, but that good design always addresses many issues, including: • designing to meet needs, wants or values • investigations to inform the use of primary and secondary data: • market research • interviews • human factors • focus groups • product analysis and evaluation • the use of anthropometric data and percentiles • the use of ergonomic data • the development of a design proposal • the planning and manufacture of a prototype solution • the evaluation of a prototype solution to inform further development.	Representation of data used to inform design decisions and evaluation of outcomes. The use of ergonomic and anthropometric data when designing products for humans and specific applications.
