

3.1.8 The requirements for textile and fashion design and development

Content	Potential links to maths and science
Product development and improvement. Through the study and critical analysis of existing products students should develop and understanding of the requirements of the following: • the design, development and manufacture of fashion clothing and textiles products to meet specification criteria • fitness for purpose • accuracy of production • how the critical assessment of products can lead to the development of new designs. Students should develop the skills to critically assess products and develop new design proposals. Students should develop their ability to work with a variety of materials, including two- and three-dimensional forms, to produce creative and original products which satisfy the demands of the target market, and consider accurate and efficient manufacture. When designing products/prototypes students should consider aesthetics, ergonomics and anthropometrics.	
Inclusive design. Students should be aware of, and be able to explain, the development of products that are inclusive in their design so that they can be used by a wide range of users including the disabled, children, the elderly, transgender people and gender non-conformists.
