

3.3.4 MD: Circular motion

	Content
MD1	Motion of a particle moving in a circle with constant speed (knowledge of radians assumed).

	Content
MD2	Understand the definition of angular speed. Use both radians and revolutions per unit time.

	Content
MD3	Relationships between speed, angular speed, radius and acceleration. Use of $v = r\omega$, $a = r\omega^2$ and $a = \frac{v^2}{r}$

	Content
MD4	Use position, velocity and acceleration as vectors in the context of circular motion.

	Content
MD5	Conical pendulum, with one or two strings.

	Content
MD6	Circular motion in a vertical plane. Includes conditions to complete vertical circles. Use of conservation of energy in this context.
