

3.8.5 Time spent on NEA

There is no limit to the amount of time that students can spend on their NEA but we recommend they spend around 30 hours on the physical creation of their products. It should be noted that excessive time spent on this component in the classroom could be detrimental to the overall attainment of the students. Teachers should strike a balance between the completion of the NEA and preparation for the examined components. Additionally, demonstration of knowledge and understanding of the theoretical framework is key to success in the NEA so time spent teaching the framework will inform the development of the NEA products.
