

3.1.4 How the body is coordinated

Students should have knowledge and understanding of the following content.

Content	Additional guidance and suggested TDAs	Specification reference GCSE Combined Science: Trilogy	Specification reference GCSE Combined Science: Synergy
Outcome 8			
The human body has automatic control systems, which may involve nervous responses or chemical responses coordinated by hormones.		4.5.2	4.3.1.4
Reflex actions are automatic and rapid. Examples include the response of the pupil in the eyes to bright light, and the knee jerk reaction.	Knowledge of the reflex arc is not required. Suggested activity for TDA Compare the speed of the catching reflex of two people.	4.5.2	4.2.1.6
Outcome 9			
Hormones are secreted by glands and are transported to their target organs by the bloodstream.	Knowledge of the names of specific hormones is not required.	4.5.3.1	4.2.1.7

Content	Additional guidance and suggested TDAs	Specification reference GCSE Combined Science: Trilogy	Specification reference GCSE Combined Science: Synergy
Several hormones are involved in the menstrual cycle of a woman, including some that are involved in promoting the release of an egg. Students should be familiar with a diagram of the menstrual cycle.		4.5.3.3	4.3.1.6
Outcome 10			
The uses of hormones in controlling fertility include: - giving oral contraceptives that contain hormones to inhibit eggs from maturing - giving 'fertility drugs' to stimulate eggs to mature.	The names of the hormones involved and the mechanism by which they work are not required.	4.5.3.4 and 4.5.3.5	4.3.1.7 and 4.3.1.8
Students should be able to evaluate the benefits of, and the problems that may arise from, the use of hormones to control fertility.		4.5.3.4 and 4.5.3.5	4.3.1.8
