

3.3.3 Units of information

Content	Additional information
Know that: • a bit is the fundamental unit of information • a byte is a group of 8 bits.	A bit is either a 0 or a 1. • b represents bit • B represents byte

Content	Additional information
Know that quantities of bytes can be described using prefixes. Know the names, symbols and corresponding values for the decimal prefixes: • kilo, 1 kB is 1,000 bytes • mega, 1 MB is 1,000 kilobytes • giga, 1 GB is 1,000 Megabytes • tera, 1 TB is 1,000 Gigabytes. Be able to compare quantities of bytes using the prefixes above.	Students might benefit from knowing that historically the terms kilobyte, megabyte, etc have often been used to represent powers of 2. The International System of Units (SI units) kilo, mega and so forth refer to values based on powers of 10. When referring to powers of 2 the terms kibi, mebi and so forth would normally be used but students do not need to know these.
