

3.3.4 Binary arithmetic

Content	Additional information
Be able to add together up to three binary numbers.	Students will need to be able to add together up to three binary numbers using a maximum of 8 bits per number. Students will only be expected to add together a maximum of three 1s in a single column. Answers will be a maximum of 8 bits in length and will not involve carrying beyond the 8th bit.
Be able to apply a binary shift to a binary number.	Students will be expected to use a maximum of 8 bits. Students will be expected to understand and use only a logical binary shift. Students will not need to understand or use fractional representations.
Describe situations where binary shifts can be used.	Binary shifts can be used to perform simple multiplication/division by powers of 2.
