

3.2.2 Forces and stresses

In relation to **at least one** material category or system, students should know and understand the impact of forces and stresses and the way in which materials can be reinforced and stiffened.

Materials and objects can be manipulated to resist and work with forces and stresses

Content	Potential links to maths and science
Tension, compression, bending, torsion and shear.	Changing the magnitude and direction of forces.

Materials can be enhanced to resist and work with forces and stresses to improve functionality

Content	Potential links to maths and science
How materials can be reinforced, stiffened or made more flexible: eg lamination, bending, folding, webbing, fabric interfacing.
