

3.3.6 Prototype development

Content	Potential links to maths and science
Design and develop prototypes in response to client wants and needs. Note the term prototype can be used to describe either a product or system. How the development of prototypes: • satisfy the requirements of the brief • respond to client wants and needs • demonstrate innovation • are functional • consider aesthetics • are potentially marketable. Students should know and understand how to evaluate prototypes and be able to: • reflect critically, responding to feedback when evaluating their own prototypes • suggest modifications to improve them through inception and manufacture • assess if prototypes are fit for purpose.	A presentation of data; tabulate responses and findings.

In relation to at least one of the following material categories students must develop and apply an in-depth knowledge and understanding of sections [Selection of materials and components](#) (page 33) to [Specialist techniques and processes](#) (page 35)

- papers and boards
- timber based materials
- metal based materials
- polymers
- textile based materials
- electronic and mechanical systems.
