

3.4.2 Lighting designer

Students who have chosen lighting design as a specialism are expected to:

- learn how to design and realise lighting that contributes positively to the overall effect of the performance and communicates intended meaning for an audience
- develop the ability to design and realise lighting capable of establishing the location, time and/or to enhance mood or atmosphere
- develop the ability to design and realise a range of lighting effects eg through the use of colour, gobos, gels, filters, gauzes, projections and lighting states through intensity, fading and cross-fading, blackout, shadow, directional lighting
- develop the ability to select the appropriate equipment and determine its position in order to realise the intended design eg choice of lanterns and lamps – profile, Fresnel, flood, moving light, birdies, strobes; rigged, floor and side lights; angle and focus of lanterns
- develop an understanding of how to apply rigging, positioning, angling and focusing
- adopt the latest safe working practices.

It is the student's lighting **design** that is assessed. Although students are expected to operate the lighting equipment when possible, this will not form part of the assessment.
