

3.3.3 C2

Basic foundation content	Additional foundation content	Higher content only
Represent data sets graphically using calculated key values as necessary, and interpret and compare data sets displayed graphically as: • bar charts • line charts • time series • scatter charts.	Interpret and compare data sets displayed graphically as: • bar line charts • frequency polygons • cumulative frequency (discrete and grouped) charts • histograms (equal width) • box plots.	Calculate and use frequency density to draw histograms (unequal width), and interpret and compare data sets displayed in histograms (unequal width).

Notes: includes dual, multiple, composite and percentage bar charts. Includes cumulative frequency step polygons for discrete data.
