

3.3 Biodiversity

- i Know that biodiversity can be assessed at different scales:
- within a habitat at the species level using a formula to calculate an index of diversity:
$$D = \frac{N(N-1)}{\sum n(n-1)}$$
 - within a species at the genetic level by looking at the variety of alleles in the gene pool of a population.
- ii Understand the ethical and economic reasons (ecosystem services) for the maintenance of biodiversity.
- iii Understand the principles of ex-situ (zoos and seed banks) and in-situ conservation (protected habitats), and the issues surrounding each method.
