

or Unit 6. They may also appear in the written examination for Unit 4. The core practical codes (eg CP1, CP2 etc) should be used when completing the record card for each student.

---

## Use of examples

### Examples in practicals

Where 'eg' follows a type of experiment in the specification students are not expected to have carried out that specific experiment. However they should be able to use data from that or similar experiments.

For instance in this unit, *4.3g How fast? – rates*, the specification states:

*Investigate the activation energy of a reaction eg oxidation of iodide ions by iodate(V).*

---

Students will be expected to have investigated the activation energy of a reaction, but they may or may not have done this by the oxidation of iodide ions by iodate(V).

In the unit test students could be given experimental data for this or any other reaction, and be expected to use this data to evaluate or estimate the activation energy.

### Examples in unit content

Where 'eg' follows a concept students are not expected to have been taught the particular example given in the specification. They should be able to illustrate their answer with an example of their choice.

For instance in this unit, *4.7m Acid/base equilibria*, the specification states:

*explain the importance of buffer solutions in biological environments, eg buffers in cells and in blood ( $\text{H}_2\text{CO}_3/\text{HCO}_3^-$ ) and buffers in foods to prevent deterioration due to pH change (caused by bacterial or fungal activity).*

Students will be expected to explain the importance of buffer solutions in biological systems, but they may or may not have looked at buffers in cells and blood, or in food.

In the unit test students could be asked to illustrate the importance of buffer solutions with a biological example that they select themselves. This could be one listed as an example or it could be another example.

## 4.2 Assessment information

---

**Unit 4 examination** The examination will be 1 hour 40 minutes and have 90 marks. It will contain three Sections, A, B and C.

Section A is an objective test section which will aim to cover a large proportion of the specification for this unit.

Section B contains a mixture of short-answer and extended answer questions.
