

6.1 Unit description

This unit contains practical assessments that cover the content of Units 4 and 5. There is no specific content for this unit.

As with AS Unit 3 students' laboratory skills will be tested in four different ways. However there is a choice in how these can be delivered.

Activity **a** must be cover the three areas of physical, organic and inorganic chemistry. However, over activities **b**, **c** and **d** two of these areas must be covered. The types of practicals that students must complete for activities **b**, **c** and **d** are qualitative observations, quantitative measurements and preparations.

For this unit there is the opportunity for students to undertake a multi-stage experiment, which includes quantitative measurement and preparation in a longer assessment.

Edexcel will provide a selection of assessed practical sheets for activities **b**, **c** and **d** and the multi-stage experiment. Students can either complete just one assessed practical sheet for each activity, or they can complete more than one for each activity and submit the best mark. The total mark for this unit is 40.

Section 'b, c and d' include practical activities (40 marks) where the teacher uses Edexcel devised practical activity sheets and mark schemes.

Teachers have the option of marking these activities or having them marked by Edexcel.
