

3 Further differential equations	3.1	Use of Taylor series method for series solution of differential equations.	For example, derivation of the series solution in powers of x, as far as the term in x^4, of the differential equation $\frac{d^2 y}{dx^2} + x \frac{dy}{dx} + y = 0,$ where $y = 1, \frac{dy}{dx} = 0$ at $x = 0$
	3.2	Differential equations reducible by means of a given substitution.	Differential equations reducible to the types as specified in section 9 of the A level Further Pure Mathematics content for papers 1 and 2.
