

1.2 There are theoretical frameworks that attempt to explain plate movements.	a. The theory of plate tectonics and its key elements (the earth's internal structure, convection, subduction, ridge push, slab pull, sea floor spreading and palaeomagnetism).
	b. The operation of these processes at different plate margins (destructive, constructive, collision and transform). (2)
	c. Physical processes impact on the magnitude and type of volcanic eruption, and earthquake magnitude and focal depth (Benioff zone).
