

2 Subject content and assessment information

GCSE Art and Design titles

This qualification can be followed through the broad-based title of Art, Craft and Design or through one of five endorsed titles: Fine Art; Graphic Communication; Textile Design; Three-dimensional Design; Photography. When students are entered for an endorsed title, they will follow the areas of study in that endorsed title for both components. Students undertaking the Art, Craft and Design title are required to create work associated with areas of study chosen from **at least two** of the five endorsed titles for Component 1. For Component 2, Art, Craft and Design students are required to create work associated with **at least one** area of study. This ensures that in the qualification as a whole, there is a breadth and flexibility in content and approach commensurate in demand with other titles.

- Art and Design (Art, Craft and Design)
- Art and Design (Fine Art)
- Art and Design (Graphic Communication)
- Art and Design (Textile Design)
- Art and Design (Three-dimensional Design)
- Art and Design (Photography)

Qualification aims and objectives

This GCSE Art and Design qualification requires students to:

- actively engage in the creative process of art, craft and design in order to develop as effective and independent learners, and as critical and reflective thinkers with enquiring minds
- develop creative, imaginative and intuitive capabilities when exploring and making images, artefacts and products
- become confident in taking risks and learn from experience when exploring and experimenting with ideas, processes, media, materials and techniques
- develop critical understanding through investigative, analytical, experimental, practical, technical and expressive skills
- develop and refine ideas and proposals, personal outcomes or solutions with increasing independence
- acquire and develop technical skills through working with a broad range of media, materials, techniques, processes and technologies with purpose and intent
- develop knowledge and understanding of art, craft and design in historical and contemporary contexts, societies and cultures
- develop an awareness of the different roles and individual work practices evident in the production of art, craft and design in the creative and cultural industries
- develop an awareness of the purposes, intentions and functions of art, craft and design in a variety of contexts and as appropriate to students' own work
- demonstrate safe working practices in art, craft and design.

Knowledge and understanding

This qualification requires students to demonstrate the knowledge and understanding listed below through practical application of skills to realise personal intentions relevant to their chosen title(s) and related area(s) of study.

Students will be required to know and understand:

- how sources inspire the development of ideas, drawing on:
 - the work and approaches of artists, craftspeople or designers from contemporary and/or historical contexts, periods, societies and cultures
 - contemporary and/or historical environments, situations or issues
 - other relevant sources researched by the student in the chosen qualification title and area(s) of study
- the ways in which meanings, ideas and intentions can be communicated through visual and tactile language, using formal elements, including:
 - colour
 - line
 - form
 - tone
 - texture
- the characteristics, properties and effects of using different media, materials, techniques and processes, and the ways in which they can be used in relation to students' own creative intentions and chosen area(s) of study
- the different purposes, intentions and functions of art, craft and design in a variety of contexts and as appropriate to students' own work.

Skills

Students will be required to demonstrate the ability to:

- develop their ideas through investigations informed by selecting and critically analysing sources
- apply an understanding of relevant practices in the creative and cultural industries to their work
- refine their ideas as work progresses through experimenting with media, materials, techniques and processes
- record their ideas, observations, insights and independent judgements, visually and through written annotation, using appropriate specialist vocabulary, as work progresses
- use visual language critically as appropriate to their own creative intentions and chosen area(s) of study through effective and safe use of:
 - media
 - materials
 - techniques
 - processes
 - technologies
- use drawing skills for different needs and purposes, appropriate to the context
- realise personal intentions through the sustained application of the creative process.

Drawing and other materials processes

All students must use drawing to support the development process within each chosen area of study. However, students are not required to demonstrate technical mastery of drawing skills unless this is relevant to their area of study.

Drawing is at the heart of art, craft and design – from initial sketches and detailed observations to wild mark-making and expressive lines – and forms a core element of the practice of artists, craftspeople and designers.

Students need to:

- be aware that drawing takes many forms, from two-dimensional mark-making to lines made using materials to define three-dimensional space
- develop a range of drawing techniques and processes in order to communicate developing ideas clearly.

Drawing in the context of this qualification is taken to mean the following:

- recording the observed world, using mark-making in appropriate media
- exploring ideas visually, through the act of mark-making
- investigating, through the exploration of drawing media, new ways of expressing ideas, feelings or observations
- experimenting with various tools, materials and techniques.

Drawing will be assessed through all the Assessment Objectives.

Further details are given in the title-specific sections on pages 11–21.

Annotation

Students will be expected to demonstrate the ability to record their ideas, observations, insights and independent judgements visually and through informative written annotation, using suitable specialist vocabulary. Written annotation should be purposeful, not descriptive.

The purpose of integrated annotation is to allow students to:

- analyse critically, evaluate and reflect on their own work and that of others
- record notes on developments, experiments, ideas or visits.

Annotation will be assessed through Assessment Objective 3.

Digital media

Students can work entirely in digital media or entirely in non-digital media, or in a mixture of both, provided the aims and Assessment Objectives are met.

While digital media offers new possibilities for making art and design, many of the underlying principles are common to non-digital media. Formal elements apply in the same way, although there are fundamental differences between digitally and non-digitally produced images, such as the potential for different forms of interaction. Digital media presents a challenge to rethink the ways in which knowledge, understanding and skills are applied in art and design. Digital media can offer opportunities to extend the purposes of non-digital media. Digital media can function as a tool, a process, a method of dissemination and a means of interaction with any audience.

Students can use digital media within any area of study. The title-specific sections on pages 11–21 give further guidance on how digital and non-digital media may be applied.

Critical and contextual knowledge and understanding

A student's ability to understand their own work critically and justify their ideas can be developed through practical visual analysis, annotation and using the spoken word in critiques, discussions or interviews.

Students should contextualise their research and ideas, drawing inspiration from artists and designers. Students should also evaluate the art, craft and design they study, and develop an appreciation of the impact it has on their own work and that of others.

This could be in relation to evolving historical and contemporary contexts, periods, societies, environments, cultures, artistic language, situations and issues.

Comparability

The emphasis in Art, Craft and Design is on an increased breadth of approach commensurate in demand with the other titles.

Areas of study

The areas of study define the specialist practices within each title. It is expected that students will use techniques and practices from across these areas of study.

Synoptic assessment

The Externally Set Assignment (ESA) represents the culmination of the GCSE course as it draws together all the knowledge, understanding and skills developed in Component 1.

The Assessment Objectives are assessed holistically across all student evidence in each component.

GCSE titles and areas of study

Art, Craft and Design

Overview

The GCSE in Art, Craft and Design is a broad and flexible course that requires students to develop an appreciation of the creative process through a practical response, using a variety of two-dimensional and three-dimensional media, materials, techniques and processes. Students should explore critically how artists, craftspeople and designers from diverse cultures, times and societies have arrived at solutions and communicated meaning using the formal elements. Students should use this knowledge when developing new ideas, recording observations and creating outcomes which fully realise their personal intentions.

When undertaking work in Art, Craft and Design, students are expected to develop the knowledge, understanding and skills outlined on page 7. All knowledge, understanding and skills will be assessed in both components.

Areas of study

Work must demonstrate integrated knowledge, understanding and skills.

Students undertaking the Art, Craft and Design title are required to create work associated with areas of study chosen from **at least two** of the five endorsed titles for Component 1. For Component 2, Art, Craft and Design students are required to create work associated with **at least one** area of study. This ensures that in the qualification as a whole, there is a breadth and flexibility in content and approach commensurate in demand with other titles.

Art, Craft and Design students are **not permitted** to select both sculpture in Fine Art and sculpture in Three-dimensional design as their chosen areas of study, nor are they permitted to select both installation in Fine Art and installation in Photography as their chosen areas of study. Art, Craft and Design is a broad course of study, requiring students to develop an appreciation of the creative process through a practical response, using a variety of two-dimensional and three-dimensional media, materials, techniques and processes. For this reason, Art, Craft and Design students are not permitted to select both sculpture in Fine Art and sculpture in Three-dimensional Design, nor are they permitted to select both installation in Fine Art and installation in Photography as their chosen areas of study. Selecting both sculpture or both installation as areas of study would not result in a broad enough course of study and would fail to give Art, Craft and Design students a broad enough experience.

Pages 12–21 give information about the areas of study Art, Craft and Design students must choose from.

Fine Art

Overview

Fine Art may be defined as work developed primarily to communicate aesthetic, intellectual or purely conceptual ideas and meaning, rather than to serve a practical or commercial function. For example, work could be the outcome of personal experiences, thoughts and feelings, or simply to observe and record people, places and things in new and unique ways. Fine-art work will demonstrate an understanding and application of formal elements and creative skills, including mark-making. Students will use visual communication sensitively and thoughtfully to document their artistic journey and fully support their intentions.

Students will also understand that Fine Art practitioners may work to client commissions or undertake self-directed projects. They will need good communication skills in order to liaise with clients, and promote and exhibit their own work.

Knowledge, understanding and skills in Fine Art

Students are required to develop the knowledge, understanding and skills outlined on page 7 when undertaking work in Fine Art. All knowledge, understanding and skills will be assessed in both components.

There are many skills, techniques, materials, processes and concepts that are essential to all areas of study in Fine Art. In addition to any specialist requirements listed under the chosen area(s) of study, students should develop a practical knowledge and understanding of:

- the use of formal elements and visual communication through a variety of approaches
- the use of observational skills to record from sources and communicate ideas
- characteristics of media and materials such as wet and dry, malleable, resistant and digital
- properties of colour and light such as hue, tint, saturation and tone
- the effects and creative potential of combining and manipulating different two-dimensional and three-dimensional materials and media
- the use of digital and/or non-digital applications.

Areas of study

Work must demonstrate integrated knowledge, understanding and skills. Work is not limited to one area of study and students could develop work in **at least one** of the following areas of study.

Drawing

- The use of expressive and descriptive mark-making to record and communicate ideas.
- The use of a range of drawing materials, media and techniques such as graphite, pastel, charcoal, ink, chalk, digital drawing applications and a range of drawing surfaces.

Installation*

- The use of controlled environments to create atmosphere, influence perception and communicate ideas.
- The use of a range of installation materials, media and techniques such as film, projection, live performance, objects, text, audio elements, controlled lighting and designed interior and exterior spaces, static and interactive elements.

Lens-/light-based media

- The use of digital, film and/or video elements such as lighting, time, sound, editing, space and composition to communicate ideas.
- The use of a range of lens- and light-based media, materials and techniques such as montage, mixed media, installation, animation, studio and location photography, pre-and post-production manipulation.

Mixed media

- The combining and manipulating of two-dimensional and three-dimensional media to communicate ideas.
- The combination of a range of mixed media materials and techniques such as wet and dry media, collage, objects, textiles, two- and three-dimensional elements, digital and non-digital applications.

Land art

- The creation of site-specific work that uses or accentuates the natural landscape or man-made environment to create atmosphere and communicate ideas.
- The use of a range of land art materials, tools and techniques such as natural resources, found objects, constructing formations, and manipulation of environmental elements.

Printing

- The creation of surfaces from which an image can be transferred to communicate ideas.
- The use of a variety of materials, media and techniques such as linoleum, screen, intaglio, relief, lithography, drypoint, etching and monoprint, using a range of inks and printing surfaces.

Painting

- The use of expressive and descriptive mark-making to record and communicate ideas.
- The use of a range of painting materials, tools and techniques such as gouache, watercolour, acrylic, oil, dyes, brushes, digital painting applications and a range of painting surfaces.

Sculpture**

- The creation of form through manipulation of three-dimensional materials to communicate ideas.
- The use of a range of sculpting materials, tools and techniques such as carving, modelling, joining, constructing and reducing, and transposing two-dimensional images into three-dimensional forms.

Drawing and other materials processes

Drawing can be applied in all its forms across traditions and technologies, and it can be critical and accurate as well as explorative and experimental. Drawing takes many forms from two-dimensional mark-making, to lines made using materials to define three-dimensional space.

Drawing is essential to recording from life, describing a mood or emotion, as well as capturing an expression, atmosphere or tension.

Graphic Communication

Overview

Graphic Communication introduces students to a visual way of conveying information, ideas and emotions, using a range of graphic media, processes, techniques and elements such as colour, icons, images, typography and photographs. Students should conduct primary and secondary investigations during their design development, and explore traditional and/or new technologies. They should also consider the use of signs and symbols, and the balance between aesthetic and commercial considerations.

Students will also understand that Graphic Design practitioners may work within a small team environment or work as freelance practitioners. They may be responsible for a particular aspect of the Design or Production process or for the entire design cycle. They will need good communication skills in order to liaise with clients and to promote themselves as graphic designers.

Knowledge, understanding and skills in Graphic Communication

Students are required to develop the knowledge, understanding and skills outlined on page 7 when undertaking work in Graphic Communication. All knowledge, understanding and skills will be assessed in both components.

There are many skills, techniques, materials, processes and concepts that are essential to all areas of study in Graphic Communication. In addition to any specialist requirements listed under the chosen area(s) of study, students should develop a practical knowledge and understanding of:

- the use of formal elements and visual communication through a variety of approaches
- the use of observational skill to record from sources and communicate ideas
- graphic materials and techniques such as traditional and digital graphics, printing and web-based technologies
- properties of colour and light such as hue, tint, saturation and tone
- the effects and creative potential of combining and manipulating different two-dimensional and three-dimensional materials and media
- the use of digital and/or non-digital applications.

Areas of study

Work must demonstrate integrated knowledge, understanding and skills. Work is not limited to one area of study and students could develop work in **at least one** of the following areas of study.

Advertising

- The use of advertising to convey information for clients and audiences that promotes corporate identity.
- The use of traditional graphic media and current technology.

Communication graphics

- The use of communication through graphics to develop solutions for worldwide identity.
- The exploration of traditional and digital graphic media in both two- and three-dimensions.

Design for print

- The use of design-based solutions in media for use in creating visual and written material for public distribution.
- Developing solutions in both traditional print and digital technology.

Illustration

- The use of illustration and narrative to communicate factual, fictional and/or technical ideas for a particular purpose or audience.
- The use of a range of illustration materials, tools and techniques such as digital applications, wet and dry processes and drawing, painting and printing techniques.

Interactive design (including web, app and game)

- The use of interactive technology such as web-based, mobile and other personal devices, television and games to communicate with and engage audiences.
- The use of a range of interactive design materials, tools and techniques such as two- and three-dimensional graphics, digital applications and time-based media.

Multi-media

- The use of traditional and non-traditional media to communicate ideas for a range of purposes and audiences.
- The combination of a range of multi-media materials, tools and techniques such as motion graphics, lens-based and digital video, animation and recording in screen-based technology.

Package design

- The functional design of 3D material to protect, promote and communicate brand identity for a range of products and purposes.
- The use of a range of package design materials, tools and techniques such as traditional and non-traditional graphic media and construction processes and materials.

Signage

- The development of signage, which is both specific and worldwide in its application.
- The use of digital and non-digital methods of making symbols and signs.

Typography

- The arrangement and manipulation of type traditional and non-traditional to communicate ideas and create visual interest.
- The use of a range of typographic materials, tools, techniques and elements such as letter forms, fonts and typefaces, digital and non-digital methods.

Drawing and other materials processes

Drawing in Graphic Communication is inherent in the process from initial idea to final realisation of the product. Design roughs to final working drawings, including digital drawings, form part of the essential process of discovery. Students should create drawings from primary sources using a range of media, techniques and processes. Students should also be aware of new and emerging technologies, which can be used in the processes of drawing and mark-making.

Textile Design

Overview

Textile Design is a versatile practice that involves the creation, selection, manipulation and application of a range of materials such as fibres, yarns and fabrics, and processes such as weaving, knitting, stitching and printing to create designs and products. Textile designers work in multi-disciplinary ways to create ideas, materials and techniques for different applications. Textile designers also play an important role in the world of fashion, theatre, performance and retail.

Students will also understand that Textile Design practitioners may work within a team environment in a large commercial manufacturing company, on a single aspect of the design or making process, or work as freelance practitioners on commissions or self-directed projects. They will need good communication skills in order to liaise with clients and to promote themselves as textiles designers and makers.

Knowledge, understanding and skills in Textile Design

Students are required to develop the knowledge, understanding and skills outlined on page 7 when undertaking work in Textile Design. All knowledge, understanding and skills will be assessed in both components.

There are many skills, techniques, materials, processes and concepts that are essential to all areas of study in Textile Design. In addition to any specialist requirements listed under the chosen area(s) of study, students should develop a practical knowledge and understanding of:

- the use of formal elements and visual communication through a variety of approaches
- the use of observational skill to record from sources and communicate ideas
- characteristics of materials such as natural and synthetic, functionality, recyclability and sustainability
- properties of colour, texture and light
- the effects and creative potential of combining and manipulating different two-dimensional and three-dimensional materials and media
- the use of digital and/or non-digital applications.

Areas of study

Work must demonstrate integrated knowledge, understanding and skills. Work is not limited to one area of study and students could develop work in **at least one** of the following areas of study.

Constructed textiles

- Innovative manipulation and reworking of threads and fabrics.
- The use of a range of constructed textiles materials, tools and techniques such as woven and stitched, materials and digital and non-digital processes.

Digital textiles

- The design of textiles, employing digital techniques for use in creative and commercial industries such as fabric, carpet and wallpaper design.
- The use of a range of digital textiles materials, tools and techniques such as traditional and non-traditional digital methods for recording and developing ideas in colour, construction, design, repeat pattern, surfaces and materials.

Dyed fabrics

- The use of natural and synthetic dyes.
- The use of resist and applied techniques with natural and man-made fibres.

Printed fabrics

- The use of printed textiles to create bespoke pieces and haute couture.
- The use of a range of printed textiles materials, tools and techniques such as monoprint, transfer-relief, relief print, wood-cut, lino-cut, silk-screen and digital printing on fabrics.

Fashion design

- The design and creation of clothing and fashion for creative and commercial audiences, clients and consumers.
- The use of a range of fashion design techniques, materials and tools such as pattern cutting, adornment, accessories and illustration on fabrics and garments with consideration of sustainable materials, recycling and ethical manufacture.

Installed textiles

- The use of textiles to control and transform perception in a site-specific interior space.
- The use of a range of installed textiles materials, tools and techniques such as padding, collage and assemblage.

Soft furnishings

- The design of constructed textiles for use in furnished interiors, utilising their tactile and physical qualities for intended purposes.
- The creative use of the tactile and physical qualities of textiles in an interior space.

Stitched and/or embellished textiles

- The design of stitched and/or embellished textiles for use in creative and commercial industries such as fashion, costume and interiors.
- The use of a range of stitched and/or embellished textiles materials, tools and techniques such as application and incorporation of media, objects and embellishments, hand and machine stitching.

Drawing and other materials processes

Drawing is an essential skill in the development process of Textile Design, from initial visual research, recording from primary sources, through to the translation of ideas into finished designs. Drawing in Textile Design can embrace a range of tools across all areas of study, and outcomes can be digital and/or non-digital. A range of drawing and mark-making methods will encourage students to consider multiple ways of reading, thinking and applying drawing in different contexts.

Three-dimensional Design

Overview

Three-dimensional Design is concerned with the designing, prototyping, modelling or making of functional and aesthetic consumer products, interiors and architecture. Students should engage with appropriate processes, materials and construction techniques, using maquettes, models and working drawings to help take their initial ideas through to realisation.

Students will also understand that Three-dimensional Design practitioners may work within a small team environment or work as freelance practitioners. They may be responsible for a particular aspect of the Design or Production process or for the entire design cycle. They will need good communication skills in order to liaise with clients and to promote themselves as three-dimensional designers.

Knowledge, understanding and skills in Three-dimensional Design

Students are required to develop the knowledge, understanding and skills outlined on page 7 when undertaking work in Three-dimensional Design. All knowledge, understanding and skills will be assessed in both components.

There are many skills, techniques, materials, processes and concepts that are essential to all areas of study in Three-dimensional Design. In addition to any specialist requirements listed under the chosen area(s) of study, students should develop a practical knowledge and understanding of:

- the use of formal elements and visual communication through a variety of approaches
- the use of observational skill to record from sources and communicate ideas
- characteristics of materials such as resistance, malleability, recyclability and sustainability
- the elements of three-dimensional design such as light, space, form, scale and proportion
- the effects and creative potential of combining and manipulating different two-dimensional and three-dimensional materials and media
- the use of digital and/or non-digital applications.

Areas of study

Work must demonstrate integrated knowledge, understanding and skills. Work is not limited to one area of study and students could develop work in **at least one** of the following areas of study.

Architectural design

- The use of the elements of three-dimensional design to develop and create building structures.
- The use of a range of architectural design materials, tools and techniques such as digital and non-digital design methods, graphic and construction materials and the generation of plans, working diagrams and models with consideration of sustainability and related environmental issues.

Interior design

- The use of the elements of three-dimensional design to develop and create interior environments.
- The use of a range of interior design materials, tools and techniques such as digital and non-digital design methods, graphic and construction materials, three-dimensional models and surface patterns/textures.

Product design

- The generation and development of three-dimensional design ideas for consumer products with considerations for ergonomics and functionality.
- The use of a range of product design materials, tools and techniques such as two-dimensional and three-dimensional modelling, digital and non-digital design methods and surface considerations. Exhibition design
- The design of both interior and exterior spaces for the purposes of exhibition and presentation.
- The use of a range of exhibition design materials, tools and techniques such as two-dimensional graphics and three-dimensional forms, construction techniques and presentation methods.

Environmental/landscape design

- The use of the elements of three-dimensional design to create exterior living, recreational and working environments.
- The use of a range of environmental/landscape design materials, tools and techniques such as sculptural materials, digital and non-digital design methods, graphic and construction materials and the generation of plans, working diagrams and models with consideration of sustainability and environmental issues.

Sculpture*

- The design of sculptural work to meet a specific purpose or for an intended space or site.
- The use of a range of sculptural materials, tools and techniques such as digital and non-digital design methods, models and sculptural media.

Design for theatre, film and television

- The use of traditional and non-traditional media to develop and create set, prop, and costumes designs for theatre, film and television.
- The use of a range of design materials, tools and techniques such as digital and non-digital design methods, graphic and construction materials.

Jewellery and body adornment

- The development and construction of both individual and mass produced jewellery and body adornments.
- The use of a range of jewellery and body adornment materials, tools and techniques such as metal, glass, textiles, wood and plastics, modelling, digital and non-digital design and recording methods.

Ceramics

- The creation of non-functional ceramic artefacts using both form and surface quality.
- The use of a range of ceramics materials, tools and techniques such as modelling, casting, throwing and hand-building, glazing, surface decoration/texture and firing.

Drawing and other materials processes

Students of Three-dimensional Design need to demonstrate how a three-dimensional world can be translated into a two-dimensional one through technical and free-hand drawings. It is important to develop drawing skills to express a range of emotions, using different tools, materials and techniques. The formal elements should also be applied, especially those such as texture, colour and light.

Photography

Overview

Photography may be defined as the creative journey through the process of lens- and light-based media. This could include work created using film, video, digital imaging or light sensitive materials. With the developments of new affordable lens-based technologies, students should attempt to use the photographic mediums to explore and create a body of work, which develops and refines both the process and the concept.

Students will also understand that Photography practitioners may work to client commissions within a commercial photography studio, or work as freelance photographers. They will need photo manipulation and graphic design skills, and good communication skills in order to liaise with clients and to promote themselves as photographers.

Knowledge, understanding and skills in Photography

Students are required to develop the knowledge, understanding and skills outlined on page 7 when undertaking work in Photography. All knowledge, understanding and skills will be assessed in both components.

There are many skills, techniques, materials, processes and concepts that are essential to all areas of study in Photography. In addition to any specialist requirements listed under the chosen area(s) of study, students should develop a practical knowledge and understanding of:

- the use of formal elements to communicate a variety of approaches
- the camera and its functions, including depth of field, shutter speed, focal points and viewpoints
- the application of observational skills to record from sources and communicate ideas
- the effects and creative potential of combining and manipulating different two-dimensional and three-dimensional materials and media
- the use of digital and/or non-digital applications.

Areas of study

Work must demonstrate integrated knowledge, understanding and skills. Work is not limited to one area of study and students could develop work in **at least one** of the following areas of study.

Documentary photography

- The use of the photographic process to provide a narrative of events and/or situations.
- The use of a range of documentary photography materials, tools and techniques such as compositional, proximity to the subject, focal points and the involvement of the photographer with the scene being documented.

Photo-journalism

- The use of the photographic process to record events as they happen to support the written word.
- The use of a range of photo-journalism materials, tools and techniques such as manipulation of images for artistic effect through depth of field, shutter speed, focal points and viewpoints.

Studio photography

- The use of a formal studio setting to control the environment for a variety of subject matters such as portraiture and still life.
- The use of a range of studio photography materials, tools and techniques such as lighting and the use of light, props, posing and the arrangement of objects.

Location photography

- The use of subject matter found or placed to manipulate the formal elements within an existing environment.
- The use of a range of location photography materials, tools and techniques such as lighting and light metering, developing site-specific shoot plans.

Experimental imagery

- The control of light and photographic processes to create non-traditional photographic outcomes.
- The use of a range of experimental imagery materials, tools and techniques such as analogue and digital photography, manual manipulation and digital and non-digital processes and outcomes.

Installation*

- The creation and presentation of photographic artwork for a site-specific space to control and transform viewer perception.
- The use of a range of installation imagery materials, tools and techniques such as location, projection, film, sound, scale and interactivity.

Moving image: film, video and animation

- The recording and use of moving image to communicate a visual narrative
- The use of a range of moving image materials, tools and techniques such as storyboards, scripts, digital, non-digital mixed media methods

Drawing and other materials processes

The word photography could be taken to mean 'a graphic representation with light'. In this way a photograph can take on the qualities of a drawing. Drawing methods such as pen or pencil on paper may enhance students' development and understanding of photographic ideas, for example to plan shots, analyse and deconstruct their own imagery, or record ways in which practitioners have used formal elements and visual language. Students should use a variety of tools and materials, as appropriate, for recording their surroundings and source materials.

Component 1: Personal Portfolio

Content overview

- Students must work within one of the following titles: Art, Craft and Design; Fine Art; Graphic Communication; Textile Design; Three-dimensional Design; Photography.
- Students undertaking Art, Craft and Design must create work associated with areas of study chosen from **at least two** of the endorsed titles. Students undertaking one of the endorsed titles must create work associated with **at least one** area of study for that title.
- Students create a personal portfolio of work that demonstrates the knowledge, understanding and skills on page 7.
- Centres are free to devise any theme(s), project(s) or task(s) appropriate to their students and resources. They may each have a separate focus or be interconnected.
- This component allows students opportunities to:
 - develop and explore ideas
 - research primary and contextual sources
 - experiment with media, materials, techniques and processes
 - present personal response(s) to theme(s) set by the centre.
- The proportion of the 120 guided learning hours spent on this component should reflect its 60% weighting.

Assessment overview

- Students' work must comprise supporting studies and personal response(s).
- Students' work must show evidence of all four Assessment Objectives.
- All work is internally set and is internally marked using the assessment grid on pages 32 and 33 and internally standardised.
- A sample of work is externally moderated by a visiting moderator.
- All marks must be submitted before moderation.
- First assessment is in May/June 2018.

Detailed description

For the Edexcel GCSE in Art and Design, students must complete a Personal Portfolio of work in response to theme(s), project(s) or task(s) set by the centre.

A Personal Portfolio is defined as a body of practical research and development, relevant to the chosen theme(s), project(s) or task(s), leading to one or more outcomes or to a variety of resolutions.

Centres will devise theme(s), project(s) and/or task(s) in consultation with their students to ensure development of the required knowledge, understanding and skills stated in the specification content; coverage of Assessment Objectives; and personal creative engagement. Theme(s), project(s) or task(s), and resulting work, may be separate in focus or be interconnected. With a focus on building technical skill through exploring and experimenting with different types of media, processes and techniques, students will develop and refine ideas supported by contextual research, resulting in a personal portfolio of practical work.

This component offers ample opportunities to devise programmes of study that require the development of students' visual language to communicate personal ideas, meanings and responses.

Students should develop their personal ideas, and centres should ensure the authenticity of work submitted for assessment. Both the student and the teacher **must** sign the Authentication Sheet in *Appendix 2*, declaring that the work submitted for assessment has been carried out without assistance other than that which is acceptable according to the rules of the specification.

Students must not be allowed to access their work once submitted for assessment.

A student's Personal Portfolio of work must show evidence of all four Assessment Objectives. The Assessment Objectives are interrelated, and centres should deliver them in a holistic way. Centres must ensure full coverage across Component 1 Personal Portfolio.

Through this component, students must:

- develop ideas through investigations, demonstrating critical understanding of sources (AO1)
- refine work by exploring ideas, selecting and experimenting with appropriate media, materials, techniques and processes (AO2)
- record ideas, observations and insights relevant to intentions as work progresses (AO3)
- present a personal and meaningful response that realises intentions and demonstrates understanding of visual language (AO4).

Component 1 should allow students to demonstrate the ability to construct a sustained line of reasoning, which is coherent, relevant, substantiated and logically structured. All knowledge, skills, understanding and activities should therefore be relevant to the student's creative journey. The work undertaken for this component should be seen as part of a substantive project(s), rather than a series of disjointed tasks, and work should evidence all the Assessment Objectives holistically.

Selection of work

Supporting studies should show students' development of ideas and progress through their work. Supporting studies may be evidenced through any appropriate means such as sketchbooks, notebooks, worksheets, design sheets, different scale rough studies, samples, swatches, test pieces, maquettes and digital material.

The quality of the work submitted for assessment is key: students should be encouraged to select a focused body of work for submission that evidences:

- the progression of their ideas and their work
- the four Assessment Objectives
- the coverage of the areas of study required by the specification.
