

1.3 How energy is generated and stored in order to choose and use appropriate sources to make products and power systems	The processes, applications, characteristics, advantages and disadvantages of the following, in order to be able to discriminate between them and to select appropriately.
	1.3.1 Sources, generation and storage of energy: - a fossil fuels – oil, gas, coal - b biofuels – biodiesel and biomass - c tidal - d wind - e solar - f hydroelectric.
	1.3.2 Powering systems: - a batteries and cells - b solar cells - c mains electricity - d wind power.
	1.3.3 Factors to consider when choosing appropriate energy sources to make products and power systems: - a portability of the power source - b environmental impact - c power output - d circuit/system connections - e cost.
