

1.6 How electronic systems provide functionality to products and processes, including sensors and control devices to respond to a variety of inputs, and devices to produce a range of outputs	Recognise and apply knowledge and understanding of the working characteristics, applications, advantages and disadvantages of the following.
	1.6.1 Sensors, including: - a the role of sensors in electronic systems - b light-dependent resistors (LDRs) - c thermistor.
	1.6.2 Control devices and components, including: - a the role of switches in electronic systems - b transistors - c resistors.
	1.6.3 Outputs, including: - a the role of outputs in electronic systems - b buzzers - c light-emitting diodes (LEDs).
