

6.4 The impact of forces and stresses on natural, synthetic, woven and non-woven, knitted, blended and mixed-fibre textiles and how they can be reinforced and stiffened	An awareness of the influence of forces and stresses that act on materials and the methods that can be employed to resist them.
	6.4.1 Forces and stresses: - a compression - b tension - c shear - d natural forces within the fibre as it grows – shape - e flexibility.
	6.4.2 Reinforcement/stiffening techniques: - a ribs and boning - b suitable fabrication/assembly/construction processes - c lamination - d embedding composite materials - e stay stitching.
