

7.8 Appropriate surface treatments and finishes that can be applied to each natural and manufactured timber for functional and aesthetic purposes	Application, advantages and disadvantages of the following finishing techniques and methods of preservation, in order to be able to discriminate between them and select appropriately for use.
	7.8.1 Surface finishes and treatments: - a painting - b staining - c varnishing - d wax - e oil - f shellac - g veneering.

Assessment information

- First assessment: May/June 2019.
- The assessment is 1 hour and 45 minutes.
- There are two sections to the paper: Section A – Core content and Section B – either Metals, Papers and Boards, Polymers, Systems, Textiles or Timbers.
- Section A – students must answer all questions. This section has four questions with a total of 40 marks.
- Section B – students must answer all questions. This section has four questions with a total of 60 marks.
- Each question is set in a context.
- The paper will include open-response, graphical, calculations and extended-open-response questions.
- The paper will include questions that target mathematics.
- Calculators may be used in the examination. Information regarding the use of calculators during the examinations for this qualification can be found in *Appendix 2: Calculators*.

Synoptic assessment

Synoptic assessment requires students to work across different parts of a qualification and to show their accumulated knowledge and understanding of a topic or subject area.

Synoptic assessment enables students to show their ability to combine their skills, knowledge and understanding with breadth and depth of the subject.

This component assesses synopticity.

Sample assessment materials

A sample paper and mark scheme for this component can be found in the *Pearson Edexcel Level 1/Level 2 GCSE (9–1) in Design and Technology Sample Assessment Materials (SAMs)* document.

Component 2

Overview

Students will undertake a project as part of their non-examination assessment. The project will test students' skills in investigating, designing, making and evaluating a prototype of a product that will allow them to apply the skills they have acquired and developed throughout their study. We provide three themes, each with two contextual challenges. Students are required to choose one of these challenges and analyse it on an individual basis. Having selected a contextual challenge to work within, students should develop a range of potential ideas and then realise one through practical making activities. The project must allow students to apply knowledge and understanding in a product development process to investigate, design, make and evaluate their prototype.

This project will require students to follow an iterative design process rather than a linear process requiring them to continually test, evaluate and refine ideas. The content and assessment criteria are set out in a linear format to show what is required at each stage of the total project, but following an iterative process students will do work on different stages at a variety of points throughout their project.
