

1.12 Glacial erosion and deposition create distinctive landforms within glaciated upland landscapes	a. The role of erosional processes in the development of landforms (truncated spurs, corries, glacial troughs, glacial lake/tarns, arêtes, hanging valleys and roche moutonnées). (15)
	b. The role of depositional processes in the development of landforms (ground and terminal moraines). (15)
	c. The interaction of deposition and erosion processes in the development of landforms (crag and tail and drumlins). (15)
