

6.5 There is increasing demand for energy that is being met by renewable and non-renewable resources	a. How and why global demand and supply has changed over the past 100 years due to human intervention: world population growth, increased wealth and technological advances. (2)
	b. How non-renewable energy resources (coal, oil, natural gas and uranium) are being developed and how this can have both positive and negative impacts on people and the environment.
	c. How renewable energy resources (hydro-electric power (HEP), wind power and solar power) are being developed and how this can have both positive and negative impacts on people and the environment.
	d. How technology (fracking) can resolve energy resource shortages.
