

6.12 Management and sustainable use of water resources are required at a range of spatial scales from local to international	a. Why water resources require sustainable management.
	b. Different views held by individuals, organisations and governments on the management and sustainable use of water resources.
	c. How one developed country 🌐 and one emerging or developing country 🌐 have attempted to manage their water resources in a sustainable way.
Integrated skills: (1) Use and interpretation of UK and world maps showing the distribution of freshwater resources supply and demand (2) Use and interpretation of line graphs showing the range of future global population projections, and population in relation to likely available water resources (3) Use and interpretation of UK and World relative water stress maps.	

Assessment information

- First assessment: May/June 2018.
- The assessment is 1 hour and 30 minutes.
- The assessment consists of three sections.
- The assessment is out of 94 marks.
- The paper will assess spelling, punctuation, grammar and use of specialist terminology which will contribute 4 marks towards the overall marks for this paper.
- Each question is set in a context.
- Students must answer all questions from Sections A and B. Students must answer **one** from two optional questions (Energy resource management or Water resource management) in Section C.
- The exam includes multiple-choice questions, short open, open response, calculations and 8-mark extended writing questions.
- Extended writing questions will assess students' ability to develop extended written arguments and to draw well-evidenced and informed conclusions about geographical questions and issues.
- Calculators will be used in the examination.

Sample assessment materials

A sample paper and mark scheme for this paper can be found in the *Pearson Edexcel Level 1/Level 2 GCSE (9–1) in Geography A* Sample Assessment Materials (SAMs) document.

Component 3: Geographical Investigations: Fieldwork and UK Challenges

Overview

This component brings together practical geographical enquiry into physical and human processes and environments and the interactions between the two. The component is divided into two sections:

- Topic 7: Geographical investigations – fieldwork. Two geographical investigations each involving fieldwork and research. There is a choice of **one from two** environments in 7A: Investigating physical environments (rivers or coasts) and **one from two** environments 7B: Investigating human environments (central/inner urban area or rural settlements).
- Topic 8: Geographical investigations – UK challenges. Students are required to draw across their knowledge and understanding of the UK, from the physical and human geography drawn from Components 1 and 2, in order to investigate a contemporary challenge for the UK. Students are required to have a geographical overview of the four UK challenges in Topic 8 from which the assessment context will be drawn.

Topic 7: Geographical investigations – fieldwork

The experience of fieldwork helps students to develop new geographical insights into the two contrasting environments required for this qualification and to apply their geographical knowledge, understanding and skills to these environments.

One environment must be chosen from a river landscape or a coastal landscape and one from a central/inner urban area or rural settlement. Fieldwork must be outside the classroom and school/college grounds. It does not have to take place in the UK necessarily, but the examination for this will always treat fieldwork within the context of the UK.

Contexts for fieldwork - focus, purpose, content and skills

The table below specifies the minimum types and range of fieldwork (including qualitative, quantitative and secondary data) required for the options available.

7A: Investigating physical environments (rivers landscapes OR coastal landscapes)

Task: River landscapes – investigation of change in a river channel.

Enquiry process point	General focus and details of fieldwork
1. Formulating Enquiry questions	Students must have an opportunity to develop understanding of the kinds of questions that can be investigated through fieldwork in river environments. Students must have an opportunity to develop a question(s) based on their location and the task.
2. Fieldwork methods	Fieldwork data collection must include at least: • one quantitative fieldwork method to measure river discharge • one qualitative fieldwork method to record landforms that make up the river landscape. Human interaction: students must develop their understanding of the implications of river processes for people living in the catchment area.
3. Secondary data sources	• A flood risk map e.g. Environment Agency flood risk map. • One other secondary source.

Task: Coastal landscapes – investigation of coastal processes through landscape evidence

Enquiry process point	General focus and details of fieldwork
1. Formulating Enquiry questions	Students must have an opportunity to develop understanding of the kinds of question that can be investigated through fieldwork in coastal environments. Students must have an opportunity to develop a question(s) based on their location and the task.
2. Fieldwork methods (for coastal landscapes)	Fieldwork data collection must include at least: • one quantitative fieldwork method to measure beach morphology and sediment characteristics. • one qualitative fieldwork method to record landforms that make up the coastal landscape. Human interaction: students must develop their understanding of the implications of coastal processes for people living in the coastal environment.
3. Secondary data sources	• A geology map e.g. BGS Geology of Britain viewer. • One other secondary source.

7B: Investigating human environments(central/inner urban area OR rural settlements)

Task: Changing city environments – investigating change in central/inner urban area(s)

Enquiry process point	General focus and details of fieldwork
1. Formulating Enquiry questions	Students must have an opportunity to develop understanding of the kinds of question that can be investigated through fieldwork in urban environments. Students must have an opportunity to develop a question(s) based on their location and the task.
2. Fieldwork methods and techniques	Fieldwork data collection must include at least: • one qualitative fieldwork method to record the quality of the urban environment • one quantitative fieldwork method to measure land use function. Physical interaction: students must develop their understanding of the interaction between physical landscape features, the central/inner urban area and residents and visitors.
3. Secondary data sources	The use of at least two different secondary sources of data, including: • Census data e.g. Office for National Statistics (ONS) website • one other chosen by the centre.

Task: Changing rural environments – investigating change in rural settlements

Enquiry process point	General focus and details of fieldwork
1. Formulating Enquiry questions	Students must have an opportunity to develop understanding of the kinds of question that can be investigated through fieldwork in rural environments. Students must have an opportunity to develop a question(s) based on their location and the task.
2. Fieldwork methods and techniques	Fieldwork data collection must include at least: • one qualitative fieldwork method to record the views of people on the quality of the rural environment • one quantitative fieldwork method to measure flows of people within a rural settlement. Physical interaction: students must develop their understanding of the interaction between physical landscape features, rural settlements and residents and visitors.
3. Secondary data sources	The use of at least two different secondary sources of data, including: • Census data e.g. Office for National Statistics (ONS) Neighbourhood Statistics – neighbourhood summary report • one other chosen by the centre.
