

5 Statistics

What students need to learn:

Ref	Content descriptor	Concepts and skills
SP a	Understand and use statistical problem solving process/handling data cycle	• Specify the problem and plan • Decide what data to and what statistical analysis is needed • Collect data from a variety of suitable primary and secondary sources • Use suitable data collection techniques • Process and represent the data • Interpret and discuss the data
SP b	Identify possible sources of bias	• Discuss how data relates to a problem, identify possible sources of bias and plan to minimise it • Understand how different sample sizes may affect the reliability of conclusions drawn
SP c	Design an experiment or survey	• Identify which primary data they need to collect and in what format, including grouped data • Consider fairness • Understand sample and population • Design a question for a questionnaire • Criticise questions for a questionnaire • Design an experiment or survey • Select and justify a sampling scheme and a method to investigate a population, including random and stratified sampling • Use stratified sampling
SP d	Design data-collection sheets distinguishing between different types of data	• Design and use data-collection sheets for grouped, discrete and continuous data • Collect data using various methods • Sort, classify and tabulate data and discrete or continuous quantitative data • Group discrete and continuous data into class intervals of equal width

Ref	Content descriptor	Concepts and skills
SP e	Extract data from printed tables and lists	• Extract data from lists and tables
SP f	Design and use two-way tables for discrete and grouped data	• Design and use two-way tables for discrete and grouped data • Use information provided to complete a two-way table
SP g	Produce charts and diagrams for various data types	• Produce: – Composite bar charts – Comparative and dual bar charts – Pie charts – Histograms with equal class intervals – Frequency diagrams for grouped discrete data – Scatter graphs – Line graphs – Frequency polygons for grouped data – Grouped frequency tables for continuous data – Ordered stem and leaf diagrams – Cumulative frequency tables – Cumulative frequency graphs – Box plots from raw data and when given quartiles, median – Histograms from class intervals with unequal width • Use and understand frequency density

Ref	Content descriptor	Concepts and skills
SP h	Calculate median, mean, range, quartiles and interquartile range , mode and modal class	- Calculate: - mean, - mode, - median, - range, - modal class, - the interval which contains the median - Estimate the mean of grouped data using the mid-interval value - Find the median, quartiles and interquartile range for large data sets with grouped data - Estimate the mean for large data sets with grouped data - Understand that the expression 'estimate' will be used where appropriate, when finding the mean of grouped data using mid-interval values Use cumulative frequency graphs to find median, quartiles and interquartile range Interpret box plots to find median, quartiles, range and interquartile range

Ref	Content descriptor	Concepts and skills
SP i	Interpret a wide range of graphs and diagrams and draw conclusions	- Interpret: - composite bar charts - comparative and dual bar charts - pie charts - stem and leaf diagrams - scatter graphs - frequency polygons box plots cumulative frequency diagrams histograms - Recognise simple patterns, characteristics and relationships in line graphs and frequency polygons Find the median from a histogram or any other information from a histogram, such as the number of people in a given interval - From line graphs, frequency polygons and frequency diagrams - read off frequency values - calculate total population - find greatest and least values - From pie charts: - find the total frequency - find the size of each category - Find the mode, median, range and interquartile range, as well as the greatest and least values from stem and leaf diagrams From cumulative frequency graphs: estimate frequency greater/less than a given value find the median and quartile values and interquartile range From histograms: complete a grouped frequency table understand and define frequency density (NB: No pictograms or bar charts at higher)

Ref	Content descriptor	Concepts and skills
SP j	Look at data to find patterns and exceptions	• Present findings from databases, tables and charts • Look at data to find patterns and exceptions • Explain an isolated point on a scatter graph
SP k	Recognise correlation and draw and/or use lines of best fit by eye, understanding what these represent	• Draw lines of best fit by eye, understanding what these represent • Distinguish between positive, negative and zero correlation using lines of best fit • Understand that correlation does not imply causality • Use a line of best fit, or otherwise, to predict values of one variable given values of the other variable • Appreciate that correlation is a measure of the strength of the association between two variables and that zero correlation does not necessarily imply 'no relationship' but merely 'no linear relationship'
SP l	Compare distributions and make inferences	• Compare distributions and make inferences, using the shapes of distributions and measures of average and spread, including median and quartiles • Compare the mean and range of two distributions, or median and interquartile range, as appropriate • Understand that the frequency represented by corresponding sectors in two pie charts is dependent upon the total populations represented by each of the pie charts • Use dual or comparative bar charts to compare distributions • Recognise the advantages and disadvantages between measures of average • Compare the measures of spread between a pair of box plots/cumulative frequency graphs

Ref	Content descriptor	Concepts and skills
SP u	Use calculators efficiently and effectively, including statistical functions	- Calculate the mean of a small data set, using the appropriate key or a scientific calculator Use $\sum x$ and $\sum fx$ or the calculation of the line of best fit
