

- 4.10 Explain how data from seismometers can be used to identify the location of an earthquake
- 4.11 **Demonstrate an understanding of how P and S waves travel inside the Earth including reflection and refraction**
- 4.12 Explain how the Earth's outermost layer is composed of (tectonic) plates and is in relative motion due to convection currents in the mantle
- 4.13 Demonstrate an understanding of how, at plate boundaries, plates may slide past each other, sometimes causing earthquakes

Topic 5

Generation and transmission of electricity

- 5.1 Describe current as the rate of flow of charge and voltage as an electrical pressure giving a measure of the energy transferred
- 5.2 Define power as the energy transferred per second and measured in watts
- 5.3 Use the equation:
electrical power (watt, W) = current (ampere, A) $\times$ potential difference (volt, V)
 $P = I \times V$
- 5.4 *Investigate the power consumption of low-voltage electrical items*
- 5.5 Discuss the advantages and disadvantages of methods of large-scale electricity production using a variety of renewable and non-renewable resources
- 5.6 Demonstrate an understanding of the factors that affect the size and direction of the induced current

- 5.7 *Investigate factors affecting the generation of electric current by induction*
- 5.8 Explain how to produce an electric current by the relative movement of a magnet and a coil of wire:
 - a on a small scale
 - b in the large-scale generation of electrical energy
- 5.9 Recall that generators supply current which alternates in direction
- 5.10 Explain the difference between direct and alternating current
