

Topic 3

Production, uses and risks of ionising radiation from radioactive sources

- 3.1 Evaluate the social and ethical issues relating to the use of radioactive techniques in medical physics
- 3.2 Describe the properties of alpha, beta, gamma, positron and neutron radiation
- 3.3 Recall the relative masses and relative electric charges of protons, neutrons, electrons and positrons
- 3.4 Recall that in an atom the number of protons equals the number of electrons
- 3.5 Describe the process of β^- decay (a neutron becomes a proton plus an electron)
- 3.6 **Describe the process of β^+ decay (a proton becomes a neutron plus a positron)**
- 3.7 Explain the effects on the atomic (proton) number and mass (nucleon) number of radioactive decays (α , β and γ decay)
- 3.8 **Use given data to balance nuclear equations**
- 3.9 **Describe the features of the N - Z curve for stable isotopes**
- 3.10 **Identify isotopes as radioactive from their position relative to the stability curve**
