

Unit P3: Applications of physics

- 4.5 Demonstrate an understanding that certain stable elements can be bombarded with proton radiation to change them into radioactive isotopes
- 4.6 Describe the use of particle accelerators (cyclotrons) to produce radioactive isotopes for medical purposes
- 4.7 Demonstrate an understanding that for inelastic collisions momentum is conserved but kinetic energy is not conserved
- 4.8 Demonstrate an understanding that for elastic collisions both momentum and kinetic energy are conserved
- 4.9 Analyse collisions in one dimension in terms of momentum and kinetic energy
- 4.10 **Carry out calculations using momentum conservation for a two-body collision (in one dimension only)**
