

10.2 Studies	Understand the aims, procedures, and findings (results and conclusions), strengths and weaknesses of: *10.2.1 Yuki et al. (2007) Are the windows to the soul the same in the East and West? Cultural differences in using the eyes and mouth as cues to recognize emotions in Japan and the United States 10.2.2 Boroditsky (2001) Does Language Shape Thought?: Mandarin and English Speakers' Conceptions of Time
---------------------	--

*This study can be replicated and therefore provides an opportunity for students to carry out an ethical, investigative practical activity to aid their understanding of the study.

Section C: Research methods

Students must study the topic in this section. The knowledge and understanding of research methods will be assessed in both papers.

Paper 1: students may be asked to apply their knowledge and understanding of research methods and how studies are conducted in new contexts. Any detail students need to know about a study will be detailed in the question.

Paper 2: students knowledge and understanding of research methods will be assessed in depth in this section. The contexts used in question papers for this topic will draw on the contexts used in the compulsory topics for Paper 1.

In the examination, students could be asked to design a research study and/or evaluate how a study has been carried out from stimulus material, drawing on any of the terms in 11.1.

Opportunities for practical activities

Students should gain hands-on experience of carrying out ethical, investigative activities to aid their understanding of this subject. To help centres identify opportunities for carrying out these activities, studies that can be replicated have been marked with an asterisk. Practical activities should also be used to deliver Section C. For example, students could produce their own questionnaires to help them understand sampling methods.

Although students will not be directly assessed on these activities, the experience they gain will give them a better understanding of this subject and may enhance their examination performance.

Mathematical requirements

Psychology requires the use of mathematical skills for handling data in investigations. The mathematical skills that are required for this qualification are set out in Section 11.2 of Topic 11: Research methods – How do you carry out psychological research?
